Building an IRIS trust framework

- Following [talk](#) at TWG a few weeks ago

- 3 objectives
  - First release of Trust Framework
  - First release of incident response cooperation framework
  - Gap analysis of initial release, following experience gained

- David Crooks
- Ian Neilson
- Dave Kelsey

Trust framework

- Build the policies that IRIS need at this stage
- Build on experience with [AARC Policy Development Kit](#)
- A typical initial set of policies may comprise
  - Top Level Security Policy
    - What are the individual roles involved
    - Tie policies together
  - Acceptable Use Policy
    - What we expect of users
  - Privacy Policy
    - Required now particularly in light of GDPR

Incident response cooperation framework

- What incident response capabilities are in use now?
- Who could we contact at sites and experiments about security?
- Building trust
- Sharing experience

Conclusion

- We're leading the work, in collaboration with the community

- Security can act to enable normal operations to continue in a secure, well understood environment
  - And react in a well understood way if something happens
